Single Sign On to Student Portal
Student Information System Integration Guide

Beginning spring 2020, districts will have the ability to provide parents with direct access to the online Student Portal via their district Student Information System (SIS) or parent portal. To enable this access, a district or its SIS/parent portal provider will need to follow the steps described below. This integration will use a simple HTTP post request.

Note: Each student should have a corresponding link within the district's SIS/parent portal for parents to click that will post the student's unique login credentials which includes their portal access code (PAC) and date of birth (DOB) to the URL provided below. This post will automatically log the parent in to the Texas Student Portal, allowing the parent to view their child's STAAR, STAAR Alternate, and/or TELPAS assessment results and testing history.

Step-by-Step Guide

1. Prepare each student's PAC and DOB in the required format indicated below. This will be unique for each student.
The student's portal access code will be a 6-bit length string, which looks like:

AA12BB

The student's date of birth will be an 8-bit length string, which looks like:

MMDDYYYY

2. Use a form to send a post request with the student's login data to the Texas Student Portal's remote login URL. (Language Option: use "?lang=es" for requesting Spanish page).

1. English version

```
<form method="POST"
action="https://txparentportal.emetric.net/xssLogin?lang=en-US" target="_blank">
<input type="text" name="accesscode" value="AA12BB"/>
<input type="text" name="birthday" value="MMDDYYYY"/>
<button type="submit">Submit</button> </form>
```

2. Spanish version

```
<form method="POST"
action="https://txparentportal.emetric.net/xssLogin?lang=es" target="_blank">
<input type="text" name="accesscode" value="AA12BB"/>
<input type="text" name="birthday" value="MMDDYYYY"/>
<button type="submit">Submit</button> </form>
```

Note: UI implementation details are not specified. Each district or its SIS/parent portal provider should determine the best way to surface the links to the Texas Student Portal within its system
